

LAYER 1 — CORE FLOW (Pods, Invites, Event Entry)

Fix 1: Pod Access Logic Duplication / Confusion

Problem

Still seeing overlapping concepts:

- “Public with approval”
- “Request to join”

These behave the same but are presented differently → creates confusion.

Pass if

Each pod access type is:

- Clearly defined
- Functionally distinct
- Predictable

Fix Direction

Remove duplication → unify into one clear access model

Fix 2: Invite System Still Broken (Core Flow)

Problem

- Cannot invite users even with access enabled to pod or events
- Permissions not working consistently
- Invite flow unreliable

Pass if

Invites work consistently across all roles and contexts

Fix Direction

Fix permission system globally (not patch-level)

Fix 3: Identity & Search Mismatch

Problem

- Alphabet/name mismatch in search
- Wrong or irrelevant users appearing
- Duplicate identities (personal vs work accounts)

Impact

Breaks trust immediately in user system

Pass if

Search results are:

- Accurate
- Predictable
- Clean (no duplicates unless intentional)

Fix Direction

- Fix search logic (exact email + name match)
- Define clear identity model (merge or separate accounts properly)

Fix 4: Invite → Registration Inconsistency Across Devices

Problem

- Desktop: user must register after invite
- Mobile: user can join directly

Impact

System behaves differently across devices → breaks trust

Pass if

Same behavior across all devices

Fix Direction

Unify rule:

Invite = access

Fix 5: Ghost States in Event Entry

Problem

Users appear as:

- “Pending” even after joining
- Incorrect state visibility

Pass if

User state is always accurate:

- Invited
- Joined
- Active

Fix Direction

Fix state sync and remove ghost states

LAYER 2 — UX / INTERACTION

Fix 6: Breakout Room Duration Control (Host)

Problem

Host cannot control duration of breakout rooms.

Pass if

Host can:

- Set duration
- Adjust during round

Fix Direction

Add duration control to host panel

Fix 7: Manual Breakout Room Management Missing

Problem

Host cannot:

- Move participants
- Assign people manually

Pass if

Host can fully manage participant placement

Fix Direction

Add manual assignment + movement controls

Fix 8: Chat System Broadcasting Across Rooms (Critical)

Problem

Messages sent in one breakout room are visible in all rooms.

Impact

Severe privacy issue → breaks product credibility

Pass if

Breakout chat is strictly private per room

Fix Direction

Implement chat layers:

- Global chat
- Breakout room chat (isolated)
- 1:1 chat

Fix 9: Self-View Visibility (Mobile) for breakout rooms**Problem**

Self-view video is too small on mobile.

Pass if

User can clearly see themselves

Fix Direction

Increase size + improve positioning

Fix 10: Video Layout Hierarchy**Problem**

No clear visual priority (who is primary on screen).

Pass if

- Active speaker or match is dominant
- Layout is intuitive

Fix Direction

Define clear video hierarchy

LAYER 3 — EXPERIENCE (Flow, Emotion, Trust)

Fix 11: Matching Flow State Clarity**Problem**

- No clear state during matching
- UI spins without confirmation

- No “locked” state

Pass if

Clear states:

There's no need for additional gestures for matching -> the host clicks start round -> the participants directly go to the break out room in two seconds with some animation that creates curiosity and anticipation.

Fix Direction

Introduce explicit system states + visual indicators

Fix 12: Matching Control (Host Authority)**Problem**

- Matching auto-triggers
- “Another round” starts without control

Pass if

Host controls:

- When matching starts
- When round begins

Fix Direction

Make matching a 2-step process:

Prepare → Start

Fix 13: Round Control (Critical Host Layer)**Problem**

Host cannot:

- Stop round
- Pause round
- Control transitions

Pass if

Host has full control:

- Start
- Pause

- Stop
- Rematch
- End

Fix Direction

Build full host control panel

Fix 14: System Messaging Noise**Problem**

- “Host is wrapping up” text is unnecessary
- Messaging appears at wrong moments

Pass if

Only essential info shown:

- Round number
- Time remaining

Fix Direction

Remove unnecessary system messages

Fix 15: State Consistency (Critical System Issue)**Problem**

- Users disconnect or disappear
- Different states across devices
- UI does not reflect reality

Impact

System feels unstable

Pass if

Real-time sync of:

- Participants
- Matches
- Connection status

Fix Direction

Strengthen session handling + real-time state sync
