

Beta Testing Group Feedback

1. Event UI Improvements

- Remove or hide “Completed” events from the primary view to reduce clutter
- Reorganize event tabs/order for better usability:
 - Upcoming (primary focus)
 - Cancelled
 - All (as a secondary/optional view)
- Aim: Help users quickly focus on relevant, actionable events

2. Time & Timezone Clarity

- Add a visible timezone (TZ) indicator for each event
- Option to filter or view events based on user’s local timezone
- Clearly specify whether the displayed time is:
 - User’s local time, or
 - Event organizer’s time
- Use “hrs” suffix (e.g., 10:00 hrs) to indicate 24-hour format and avoid ambiguity
- Aim: Reduce confusion for international users scheduling across regions

3. General UX / Navigation Feedback

- Users experience uncertainty while navigating the interface
- Some actions/buttons are not immediately obvious, causing hesitation
- Users are sometimes unsure where to click next or how to proceed
- This leads to moments of friction (“trip”) instead of smooth interaction (“click”)
- Recommendation:
 - Improve visual hierarchy and button clarity
 - Add clear action cues (e.g., primary buttons, labels)
 - Make navigation more intuitive and predictable
