

Platform Improvements & Bug Fixes

1. Authentication Flow (Sign In / Sign Up)

We need to clearly separate the entry points for users:

- There should be **two distinct options**:
 - **Sign in (existing users)**
 - **Sign up (new users)**
- For **new users**, an **onboarding screen must appear first** before they enter the platform.
 - This should:
 - Briefly explain how the platform works
 - Guide them on what to do next
 - Set expectations (joining pods, matching, sessions, etc.)

2. Pod Access Messaging

- Replace the current message:
 - “No members in the pod”
 - With something more action-driven:
“**To access pod details, please join the pod.**”

This makes the experience feel intentional rather than empty.

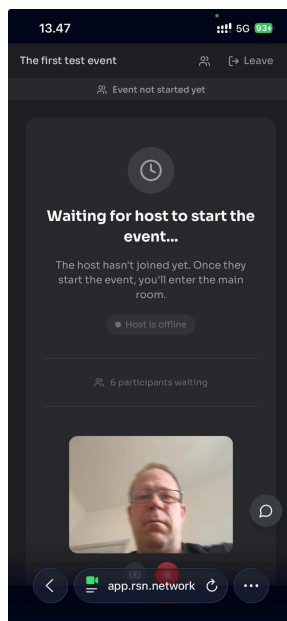

3. Check-In Logic Fix

- If a user is marked as **“Checked In”**, they should automatically be considered:
 - **“Registered”**

This should be handled at the system level to avoid confusion or duplicate states.

4. Mobile Experience Improvements

- When a user joins via mobile:
 - Their **self-view (camera preview)** should appear at the **top of the screen**
 - This aligns with standard UX expectations from video platforms
 - The top menu should be visible and accessible in the breakout room

5. Main Room Controls

Add missing controls in the main room:

- Ability to:
 - Turn **video on/off**
 - **Pin or spotlight** participants (currently missing)

These are essential for host control and user experience.

6. Matching Experience Enhancement

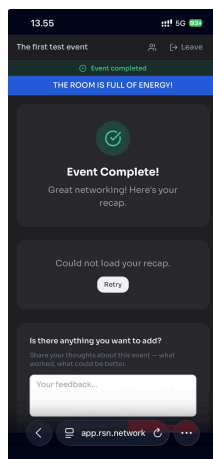

- For users: When users are being matched:
 - Add a **short animation or transition**
 - Build a sense of **anticipation/excitement**
 -
- **For host: re matching should work. Currently, there's a bug on that.**

Right now it feels abrupt — we want it to feel intentional and engaging.

7. First Event Session Issues (Critical)

There were multiple inconsistencies:

- Some users **did not get matched** due to technical issues
- Some users **received recap**, while others did not
- On **mobile**, the event:
 - **Ended abruptly without showing recap**

This needs to be standardized:

- All users should either:
 - Receive recap consistently
 - Or be redirected properly to the next step

No silent endings.

8. Chat Functionality Improvements

- Add ability to:
 - **React to messages using emojis and the using emojis**
- Ensure:
 - **Links shared in chat are clickable**

These are basic expectations in modern chat systems.

9. Session Flow Optimization

- The **“Wrapping Up” stage is too long**

Instead:

- Right after **feedback submission**:
 - Users should be **immediately redirected to the main room**

Keep transitions fast and smooth.

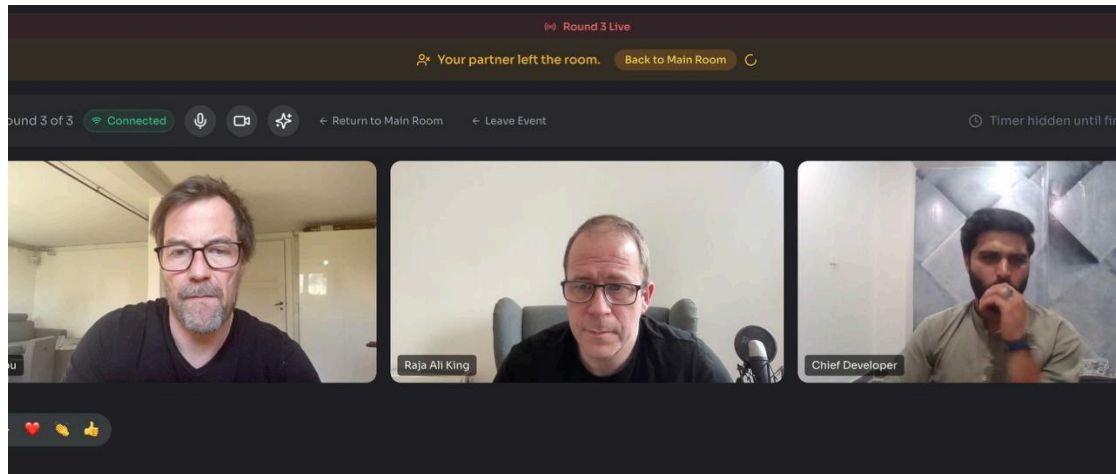

10. Breakout Room Transparency

- Users should **not see how many breakout rooms are created**

This information is unnecessary and may affect perception of the experience.

11. Name Display Bug

- There is an issue related to **user names** (unclear behavior observed)

stefan's name

Needs investigation:

- Possible areas:
 - Incorrect display
 - Duplication
 - Missing names

12. Event Control (Critical Bug)

- The event **ended automatically without host action**

This should **never happen**.

Fix required:

- Only the **host should have control** to end the event
- System should not auto-end unless explicitly configured

This is critical because it breaks the entire event experience.

Summary (Priority Focus)

High Priority Fixes:

- Event ending without host
- Matching and Rematching Bugs
- Recap Inconsistencies
- Mobile experience issues
- Main room controls (pin/spotlight)

Medium Priority:

- Session flow timing
- Pod messaging

Enhancement Layer:

- Onboarding experience
- Matching animation
- Chat improvements
