

Here are the RSN event changes from the May 10 test.

Critical fixes

1. Email invite join flow still fails

When joining from email on mobile, it asks to sign in, but the accept/join flow does not complete properly.

Expected:

After sign in, the user should land inside the event and be clearly registered.

Current:

The user appears registered only after going home and checking manually.

2. Leaving and rejoining creates ghost user problems

Stefan left, but the system still matched the old Stefan account.

Expected:

When someone leaves, their active presence must be updated immediately before matching.

Current:

A user who left can still be matched, while an active user may remain unmatched.

3. Matching must recalculate from current live state

When “Match” is pressed, it should use the latest participant state.

Expected:

Use current attendees, roles, already met history, and inactive users.

Current:

It seems to use stale data until match is run again manually.

4. Users can end up alone in breakout rooms

Shradha was alone in a breakout room on computer while mobile showed round ended and feedback.

Expected:

All devices for the same user should show one consistent event state.

Current:
Different devices show different states.

5. Remove test mode warning

Message shown:

“Test mode multiple accounts detected this is not a real event”

This should be removed from production unless deliberately enabled by admin.

7. Host control center does not work consistently for co-host

Shradha's control center did not work.

Expected:
Co-host should have defined controls that actually trigger actions.

Current:
Clicking produces inconsistent or no visible effect.

8. Host control center cannot scroll properly

Stefan could not see the last user in the control center.

Expected:

Full participant list must be scrollable and accessible on all screen sizes.

10. Participant count should separate hosts from participants

Example needed:

“5 participants and 2 hosts”

Hosts should not be silently mixed into participant count. The problem was co host was also counted.

11. Hosts need visibility mode

Host should be able to choose:

In terms of camera:

Big/main speaker

Small/normal participant

Producer/not in matching

Hidden/off-stage

This matters when one person hosts, two people co-host, or someone only produces the event.

12. Main room video layout is wrong

Each user currently sees themselves as the big video.

Expected:

Users should see the host or active speaker big, not themselves.

13. Chat does not work in breakout rooms

The breakout room chat still does not work after the supposed fix.

Expected:

Chat must work inside breakout rooms on desktop and mobile.

14. Mobile chat UX is annoying

Chat on mobile needs cleaner placement, less obstruction, and easier access.

15. Statistics are wrong

Repeated names should be merged.

Expected:

Same person should appear once with:

Met 1 time

Met 2 times

Met 3 times

Current:

Repeated accounts/names create messy duplicate statistics.

16. Matching should avoid repeat meetings

The system should not match the same two people again in the same event unless forced manually.

17. Old event lobby still open

There was a lobby open from an event on May 7.

Expected:

Old event lobbies should close automatically or show clearly as archived/inactive.

18. Super admin should have full controls

If Stefan is super admin, he should have at least the same controls as host, and probably more.

Priority order for Ali

1. Fix live participant state before matching.
2. Fix ghost users after leave/rejoin.
3. Fix invite link join flow.
4. Fix breakout room creation reliability.
5. Fix role permissions for host/co-host/super admin.
6. Fix control center for co-host.
7. Fix mobile and desktop state sync.
8. Fix breakout room chat.
9. Fix video layout so host/active speaker is big, not self.
10. Fix statistics and duplicate user merging.
11. Remove test mode warning.
12. Auto-close or archive old event lobbies.
