

This document is structured in the same flow:

Core Flow → UX → Experience → Brand

LAYER 1 — CORE FLOW (Pods, Invites, Event Entry)

Fix 1: Pod Privacy & Invitation Logic

Problem

The logic around pod types is not clear.

Users cannot understand:

- Difference between private, internal, and public pods
- Who can invite others
- Whether invites need approval

There is confusion between:

- Invite vs request to join vs approval

Pass if

- Pod types are clearly defined and behave consistently
- It is clear who can invite (owner vs members)
- Invite vs request flow is predictable

Fix Direction

- Define 3 clear pod types:
 - Private: only owner invites
 - Internal: controlled access, optional member invites
 - Public: open / request / approval
- Add setting:
 - “Allow members to invite others”

Fix 2: Invite Flow Visibility & Tracking

Problem

- After inviting people, user cannot see who was invited
- No way to re-check invited list (example: invited 10 people but cannot see them)
- Invited users only appear after manual refresh
- “All” tab does not show correct data
- Cannot access full list of all users in invitation page
- Pending invites are placed above more important information

Pass if

- Invited users are visible immediately
- No manual refresh needed
- “All” tab shows full correct list of users
- User can access and review all invited users clearly
- Clear breakdown: invited / pending / accepted / rejected

Fix Direction

- Add real-time update (push)
- Add proper invite tracking list
- Fix tab logic and ordering

Fix 3: Invite Accept → Registration Conflict

Problem

User receives:

- Pod invite
- Event invite

Even after accepting both, user still has to click “Register” again.
This creates unnecessary steps and confusion.

Pass if

- Accepting invite automatically registers user
- User can directly join event
- No duplicate actions required

Fix 4: Pod Creation Flow (Dashboard Bug)

Problem

- Clicking “Create Pod” from dashboard redirects incorrectly
- User has to click “Create Pod” again
- Flow feels broken

Pass if

- User is directly taken into created pod
- No double action required
- Flow feels complete

Fix 5: Notifications (Admin + User)

Problem

- Admin is not alerted about pending requests
- No clear notification indicator
- Users do not receive email after approval

Pass if

- Admin sees notification for pending requests
- User receives approval email
- In-app notifications work

Fix 6: Navigation Structure (Pods)

Problem

- “Browse All” appears before “Active”
- Users cannot easily find pods they belong to
- Private pods not visible where expected

Pass if

- Active pods appear first
- Private pods visible under Active
- Navigation matches user expectation

Fix Direction

Order should be:

1. Active
2. Browse All
3. Archived

Fix 7: Event Entry & System Messaging

Problem

These messages still appear and were supposed to be removed:

- “Main Room”
- “You're in the main room. The host will start matching shortly.”
- “All Rounds Complete!”
- “Take a moment to say your goodbyes...”

They feel unnecessary and confusing.

Pass if

- Only essential information is shown
- No redundant or stressful messaging
- Entry feels clean and simple

Fix 8: Onboarding Journey Placement

Problem

- Onboarding appears at random moments (e.g., during event or after invite)
- Not aligned with user entry into platform
- Feels disconnected from user journey

Pass if

- Onboarding is shown at the beginning (first login / first entry)
- Does not interrupt event or pod flow
- Feels intentional and structured

Fix Direction

- Move onboarding to:
 - First login (primary)
 - Optional: contextual onboarding for pods/events

- Avoid triggering onboarding mid-flow

LAYER 2 — UX / INTERACTION

Fix 9: Invite Tabs & Data Accuracy

Problem

- “All” tab does not show all users
- Cannot properly access full list
- Rejected users not visible

Pass if

- “All” shows complete user list
- User can scroll and view all names
- Status categories work correctly

Fix 10: Event Invitation Options

Problem

Only option available:

- Invite platform users

Missing:

- Invite pod members

Pass if

User can choose:

- Platform users
- Pod members
- External users

Fix 11: Camera & Waiting Room Behavior

Problem

- If user turns off camera in waiting room, it does not restore properly

- User cannot see themselves after turning it back on

Pass if

- Camera restores correctly after toggle
- User always sees their preview

Fix 12: Reaction System (Breakout Rooms)

Problem

- Emoji reactions are not working properly in breakout rooms
- Reaction behavior is inconsistent
- Current emoji set includes heart icons which feel more romantic than professional

Pass if

- Reactions work reliably in breakout rooms
- Reactions are visible and responsive
- Emoji set aligns with professional use

Fix Direction

- Replace heart emojis with:
 - Handshake
 - Thumbs up
- Ensure reactions are appropriate for professional networking context

Fix 13: Breakout Room Layout

Problem

- Cannot see all participants without scrolling
- Layout is not optimized

Pass if

- All participants are visible clearly
- Layout adapts properly to screen

LAYER 3 — EXPERIENCE

Fix 15: Event Stability

Problem

- Frequent “Something went wrong” errors
- Users get disconnected and rejoin

Pass if

- No random errors
- Session remains stable
- Rejoin works smoothly

Fix 16: Timer & Round Behavior

Problem

- “Last 30 seconds” timer does not trigger
- Round transitions feel inconsistent

Pass if

- Timer works correctly
- Round transitions are smooth

Fix 17: Rating Flow Issues

Problem

- Rating disappears too quickly
- Users cannot rate all participants
- Mobile rating is unstable
- If missed, cannot rate later

Pass if

- Rating remains visible long enough
- All participants can be rated
- Mobile flow works properly
- User can complete missed ratings

Fix 18: End of Event Experience

Problem

- Ending feels abrupt
- Messaging creates pressure instead of clarity

Pass if

- End flow feels calm and natural
- No forced or alarming messaging

LAYER 4 — BRAND / POLISH

Fix 19: Messaging Tone

Problem

- Messaging tone is inconsistent
- Some text feels unnecessary or stressful

Pass if

- Tone is neutral and professional
- Messaging is minimal and clear

Fix 20: UI Consistency

Problem

- Event completion screen appears visually off (black screen)
- Inconsistent UI behavior

Pass if

- UI remains visually consistent
- No abrupt visual changes

Fix 21: Branding (Email + Platform)

Problem

- Email content inconsistent
- Logo usage unclear
- Favicon incorrect

Pass if

- Branding consistent across:
 - Emails
 - Platform
 - Browser

To highlight: presentations of logo needed
