

This document is structured in the same flow:
Core Flow → **UX** → **Experience** → **Brand**

LAYER 1 — CORE FLOW (Events, Entry, Control)

Fix 1: Event Duration & Calendar Sync

Problem

Google Calendar invites are set to only 3 minutes instead of matching the full event duration. This creates confusion and breaks planning expectations.

Pass if

Calendar invite duration matches actual event duration
Users can rely on calendar timing

Fix Direction

Sync event duration correctly with calendar invites

Fix 2: Event Completion Messaging

Problem

After the round is complete, system still shows:
“wrapping up the event – say goodbye”
This message is redundant and confusing post-completion.

Pass if

No unnecessary or misleading messages after event completion
End of event feels clean and final

Fix Direction

Remove this message entirely

Fix 3: Host Controls (Session Management)

Problem

Hosts and co-hosts do not have enough control over the session.

Pass if

Host/co-host can:

- End session manually
- Extend session duration
- Edit participant matches
- Move users between breakout rooms

Fix Direction

Introduce full host control layer for session management

Fix 4: Event Exit & Navigation Flow**Problem**

After event completion, users hit a dead end or unclear path.

Pass if

Users are redirected to:

- Event space OR
- Pod discussion space

Fix Direction

Define a clear post-event navigation path (no dead ends)

LAYER 2 — UX / INTERACTION

Fix 5: Action Feedback (Critical UX Break)**Problem**

“Yes” action does not register:

- No confirmation
- No visible state change

This breaks user trust immediately.

Pass if

Every action results in:

- Immediate UI update
- Clear confirmation feedback

Fix Direction

Implement strong state feedback for all user actions

Fix 6: Messaging Accuracy (Invites)**Problem**

Incorrect messaging:

“Invited to RSN” instead of specific event

Pass if

Messaging reflects intent clearly

Example:

“You are invited to [event name]”

Fix Direction

Align all messaging with user intent (event-first language)

Fix 7: Navigation Clarity (Back to Pod)**Problem**

Users get lost after scheduling or completing events

No clear way back to Pod

Pass if

Every screen includes a clear “Back to Pod” anchor

Fix Direction

Make Pod the primary navigation base

LAYER 3 — EXPERIENCE

Fix 8: Matching Logic Reliability (Core System)

Problem

Matching is inconsistent:

- Participants left out
- Users visible but not included in matching

Pass if

Matching guarantees:

- Full coverage (if mathematically possible)
- OR clear explanation if not

Presence states are clearly defined:

- “In event”
- “Available for matching”

Fix Direction

Fix matching engine logic + define clear presence states

Fix 9: Manual Override for Matching**Problem**

No ability to adjust matches manually

Pass if

Host can:

- Reshuffle
- Move participants
- Force matches

Fix Direction

Add manual override controls (automation alone is insufficient)

Fix 10: Matching Feedback & Transitions**Problem**

Matching process feels silent and unclear

No feedback or sense of progress

Pass if

Users see:

- “Matching in progress” indicator
- Animation / visual feedback
- Clear completion signal

Fix Direction

Introduce visible system activity and transition states

Fix 11: Emotional / Transition Cues for going to Break out room**Problem**

No clear moment of transition between states

Pass if

System includes:

- Countdown
- Sound or visual transitions during when the match is being prepared

Fix Direction

Add signals that make transitions feel intentional

Fix 12: Rating Flow Simplicity**Problem**

Rating flow is confusing

“Try again” creates ambiguity.

Pass if

Flow is:

Rate → Confirm → Done

Fix Direction

Remove loops and simplify interaction

LAYER 4 — BRAND / POLISH

Fix 14: UI Stability & Feature Reliability

Problem

- Chat blocked incorrectly (“host not joined”)
- Mute state unreliable
- Buttons/features not working (emoji, background)

Pass if

All features work reliably

OR broken features are removed

Fix Direction

Fix fully or remove — do not ship partially working features

Fix 15: Visual Hierarchy (Invites)

Problem

Invite flow lacks clear priority

Pass if

Clear structure:

1. Invite from Pod
2. Invite platform users
3. Invite via email

Fix Direction

Enforce hierarchy in UI

Fix 16: Messaging Tone

Problem

Language is passive and unclear

Examples:

“event wrapping up”

“try again”

Pass if

Messaging is direct and human:

- “Matching people now”
- “You are paired with [Name]”
- “Next round starts in 5 seconds”
- “Event finished. Go back to Pod”

Fix Direction

Standardize tone across product

Fix 17: Branding (Favicon)**Problem**

Favicon not rendering correctly

Link: <https://rsn.network/favicon.png>

Pass if

Favicon displays correctly across browser

Fix Direction

Fix favicon implementation and rendering

Fix 18: Features

Problem:

The icon to change bg in main room and break out room is different.

Pass if:

Both are same for consistency and understanding.

1.
